ABSTRACT OF THE DISCLOSURE

Ink ejection/non-ejection from a plurality of ink  
ejection print elements is controlled by looking up a  
first table that indicates the correspondence between a  
first table that indicates the correspondence between a  
5 plurality of inks and gray scale values of print pixels,  
and a second table indicating combinations of density  
distribution patterns of print pixels and ink ejection  
print elements in correspondence with gray scale values,  
in accordance with a pixel density pattern and its gray  
10 scale value.
